Large

Assembly kit

The SPA cover is ideal for SPAs that are submerged in the ground or built into an underlying terrace. It can be pushed manually, whereby it slides to the side using tracks and wheels.

NOTE: It is important that the bottom surface is even so that the wheels can turn freely. In addition, it is important that the surface is structurally solid to withstand the total weight of the SPA cover.

The SPA cover come as an Assembly kit, and requires a few tools in order to be assembled. Guide for assembly is provided at delivery.

NOTE: Additional purchases such as Composite wood must be adjusted to length and installed using the included clips, screws, etc.
